

# Creating a Process Library

Creating activity or process libraries increases the range of actual activities that can be taken into account to when modeling manufacturing processes.

This procedure explains how to create a process library using generic machining activities.

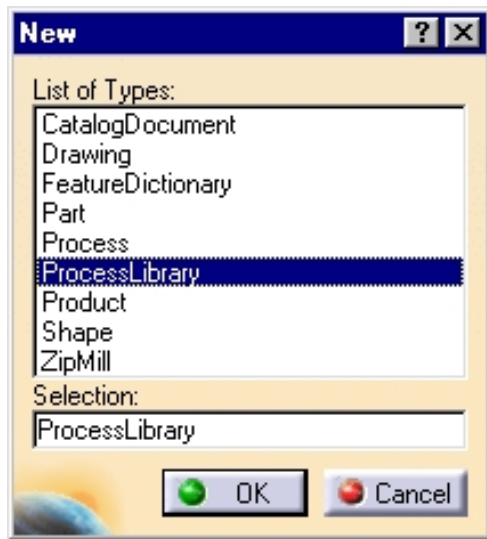

For more information about process libraries, see the [Process and Resource Definition User's Guide](#).

1. From the main menu bar, select File > New. The New dialog box appears.

Select ProcessLibrary.

2. Press the OK button. A blank process library window and the **Activity Type Creation** toolbar are now displayed.

3. Click on the Create New Activity icon.  The New type dialog box appears.

Enter the new activity type and click OK.

4. Create sub-activities under the activity by using the Create New Sub-activity icon. 

Example:
