INTRODUCTION

This document outlines the minimum hardware and software requirements needed for each SmarTeam product.

The requirements presented in this document are the minimum needed for SmarTeam products to operate without regard to special performance issues. If higher performance is required for a specific SmarTeam installation, an assessment and sizing should be performed before providing any specific hardware recommendation.

The latest version of the SmarTeam V5R20 Hardware and Software Requirements document is available from the ENOVIA SmarTeam Program Directory.

The latest information on CAD and OS compatibility is available at <http://www.3ds.com/support/>

IMPORTANT: All SmarTeam products must be installed on member servers only. They must not be installed on a server that also provides additional network services, for example, domain controllers (PDC or BDC), WINS servers, DNS servers.

VAULT REPLICATION

For more information, see [SmarTeam – Multi-Site Vault](#).

MINIMUM HARDWARE REQUIREMENTS

- ❑ As specified for [SmarTeam – Foundation](#)
- ❑ RDS 3.0 (RepliWeb Deployment Suite) does not require special hardware configuration and can run on the SmarTeam Vault Server or any other computer with sufficient resources. Resource allocation for RepliWeb does not require a dedicated or specialized computer.
- ❑ Hard disk space: 100 MB
- ❑ Available 192KB connection between sites (depending on database size and frequency of updates). This parameter depends on the total data volume, number of users, files and intensity of communications.

Note: For hardware requirements of the SmarTeam Vault Server, refer to the [SmarTeam – Foundation](#) requirements section.

SOFTWARE REQUIREMENTS

SmarTeam – Multi-site provides the means to configure and work in an environment where each vault has a parallel vault on all other sites. For Vault Server system requirements refer to the SmarTeam – Foundation Vault Server documentation.

Prerequisites:

- ❑ A server named RDS (RDS 3.0), which is used to replicate files between sites.
- ❑ A service named RDM, which complements the RDS server. RDM is required only in cases in which RDS runs under the Win32 environment and the Vault directories reside on a computer other than the Vault Server machine.

Installations of these two programs are not included on the SmarTeam - Multi-site CD.

SmarTeam Corporation provides a free license for RDS if both the following conditions are fulfilled:

- ☐ The platform is either Win32 or Linux
- ☐ The host computers do not have more than two CPUs

If RDM is required, and the conditions for a free license of RDS are met, an RDM license will also be provided free of charge by SmarTeam Corporation.

Each vault site requires an RDS installation. RDS can be installed on Windows, Linux or UNIX.

- ☐ In a Win32 environment, RDS should be installed on the Vault Server machine.
- ☐ If vault directories reside on Linux or UNIX, there are two possible RDS installation configurations:
 - o Recommended (for performance reasons) – RDS is installed directly on the Linux/UNIX machine.
 - o Optional – RDS is installed on the Vault Server machine.

Full details on specific supported operating system platforms for RDS can be found at: <http://www.repliweb.com/html/products/rdsplatforms.html>

For more complex implementation SmarTeam certifies the RepliWeb R1 product to be used for Vault replication between different vault servers. For more details on the RepliWeb R1 product, see the RepliWeb site: <http://www.repliweb.com>

SMARTTEAM – MULTI-SITE VAULT

CLIENT (ADMIN/ RUN TIME)

MINIMUM HARDWARE REQUIREMENTS

- ☐ As specified for [SmarTeam – Foundation](#)

SOFTWARE REQUIREMENTS

- ☐ As specified for [SmarTeam – Foundation](#). The Administration Tools can be installed only on Server operating systems.

VAULT REPLICATION

MINIMUM HARDWARE REQUIREMENTS

- ☐ As specified for [SmarTeam – Foundation](#)
- ☐ RDS 3.0 (RepliWeb Deployment Suite) does not require special hardware configuration and can run on the SmarTeam Vault Server or any other computer with sufficient resources. Resource allocation for RepliWeb does not require a dedicated or specialized computer.
- ☐ Hard disk space: 100 MB
- ☐ Available 192KB connection between sites (depending on database size and frequency of updates). This parameter depends on the total data volume, number of users, files and intensity of communications.

Note: For hardware requirements of the SmarTeam Vault Server, refer to the [SmarTeam – Foundation](#) requirements section.

SOFTWARE REQUIREMENTS

SmarTeam – Multi-site provides the means to configure and work in an environment where each vault has a parallel vault on all other sites. For Vault Server system requirements refer to the SmarTeam – Foundation Vault Server documentation.

Prerequisites:

Microsoft DFS (Distributed File System) on Microsoft Windows Server 2003 or Microsoft Windows Server 2008 or RepliWeb RDS 3.0 or R1

1. **DFS:** To activate a working DFS Replication system between the Vault sites:
 - All Storage machines must run on Windows Server 2003 R2 Operating System.
 - The Network Topology must have an Active directory and a Domain Controller.
 - All Storage Machines on all sites must be in the same forest. You cannot enable replication across servers in different forests.
 - The Vaults must be located on NTFS Volumes. They cannot be mapped to the storage machines by NFS. This means, that files cannot be located on special storage solutions. UNIX machines are not supported as well.
 - For further information on Microsoft DFS Replication refer to the Microsoft site.

Note: Clusters are not supported. In a cluster, the Vaults must be located on a local node, and not as a shared resource. The DFS Service is not cluster aware, and will not fail over to another node. Locating the Vaults on a local node, prevent SmarTeam from working properly in a case of fail over.

2. **RDS:**

- A server named RDS (which contains the installation of either RDS 3.0 or R1), which is used to replicate files between sites.
- A service named RDM, which complements the RDS server. RDM is required only in cases in which RDS runs under the Win32 environment and the Vault directories reside on a computer other than the Vault Server machine.

Installations of these two programs are not included on the SmarTeam - Multi-site CD.

SmarTeam Corporation provides a free license for RDS if both the following conditions are fulfilled:

- ☐ The platform is either Win32 or Linux
- ☐ The host computers do not have more than two CPUs

If RDM is required, and the conditions for a free license of RDS are met, an RDM license will also be provided free of charge by SmarTeam Corporation.

Each vault site requires an RDS installation. RDS can be installed on Windows, Linux or UNIX.

- ☐ In a Win32 environment, RDS should be installed on the Vault Server machine.

- ❑ If vault directories reside on Linux or UNIX, there are two possible RDS installation configurations:
 - Recommended (for performance reasons) – RDS is installed directly on the Linux/UNIX machine.
 - Optional – RDS is installed on the Vault Server machine.

Full details on specific supported operating system platforms for RDS can be found at: <http://www.repliweb.com/html/products/rdsplatforms.html>

SMARTTEAM – GATEWAY

MINIMUM HARDWARE REQUIREMENTS

- ❑ Pentium IV 2.4 MHz or higher
- ❑ Memory: 1 GB or higher
- ❑ Hard disk space: 2 GB
- ❑ 100 MB/sec NIC or higher

Note: Based on workload, level of communication and volume of exchanged data, the Gateway server may be installed on a dedicated machine.

SOFTWARE REQUIREMENTS

- ❑ As specified for [SmarTeam – Foundation](#)
- ❑ Integration middleware: Microsoft BizTalk Server
 - Microsoft BizTalk Server 2006 Standard Edition or Enterprise Edition
 - Microsoft SQL Server 2008 is required for Microsoft BizTalk 2006.
 - Windows Server 2003 SP2 or 2003 R2 SP2 32 bit, Standard Edition or Enterprise Edition
 - Windows Server 2003 R2 64 bit, Enterprise Edition or Standard Edition

For additional details on Microsoft BizTalk and its prerequisites, refer to

<http://www.microsoft.com/biztalk>

Notes:

1. Based on selected integration topology, SmarTeam – Gateway can be used without middleware.
2. Administrator-level knowledge of middleware (BizTalk) is required for implementation.
3. The implementation of this product also requires prior SmarTeam certification.

- ☐ Oracle 10g (x86 and x64)
- ☐ Oracle 11g (x86 and x64)

Notes:

- When using SmarTeam - Web Editor, it is advised to install Oracle 10g due to performance issues
- Compatibility issues may occur when the following configuration is used:
 - The Foundation server and the database server are installed on the same machine
 - Foundation must be installed as a 32-bit client
 - Database server is installed as a 64-bit server
- ☐ Microsoft SQL Server 2008 (x86 and x64)
- ☐ IBM DB2 9.5

For database operating system and hardware requirements, refer to the appropriate vendor at the following sites:

<http://www.oracle.com/products>

<http://www.microsoft.com/sql/default.asp>

<http://www.ibm.com>

Note: After installing the SQL Server 2008 Administrator (with DBA privileges) run the following statements to allow a multi-user environment.

```
ALTER DATABASE [DB NAME] SET READ_COMMITTED_SNAPSHOT ON;
```

```
ALTER DATABASE [DB NAME] SET ALLOW_SNAPSHOT_ISOLATION ON;
```

LICENSE USE MANAGEMENT

IBM License Use Management (LUM) is required to serve concurrent license keys across a network. A LUM configuration file (i4ls.ini) is required to access concurrent license keys from these servers. Server and Nodelock license management mechanisms can be used on Windows or UNIX license servers, as supported by IBM.

The minimum IBM LUM level is V4.6.8.3.

The release of IBM LUM, together with any applicable patches, can be downloaded at no charge from <http://www-306.ibm.com/software/awdtools/lum/>.

Refer to IBM's website at <http://www-306.ibm.com/software/awdtools/lum/> for updated information on LUM system requirements.

Note: LUM 4.6.8 cannot be used on virtual machines for Node-lock or server installations.
