INTRODUCTION

This document outlines the minimum hardware and software requirements needed for each SmarTeam product.

The requirements presented in this document are the minimum needed for SmarTeam products to operate without regard to special performance issues. If higher performance is required for a specific SmarTeam installation, an assessment and sizing should be performed before providing any specific hardware recommendation.

The latest version of the SmarTeam V5R21 Hardware and Software Requirements document is available from the ENOVIA SmarTeam Program Directory.

The latest information on CAD and OS compatibility is available at <http://www.3ds.com/support/>

IMPORTANT: All SmarTeam products must be installed on member servers only. They must not be installed on a server that also provides additional network services, for example, domain controllers (PDC or BDC), WINS servers, DNS servers.

LICENSE MANAGEMENT

License Management is required to serve concurrent license keys across a network. From V5R21, SmarTeam products are protected, by default, using the Dassault Systèmes License Server (DSLS). Alternatively, IBM's License Use Management (LUM) may be selected instead of DSLS during the installation process.

DSLS

The supported DSLS level is V6R2012.

A DSLS configuration file (DSLicSrv.txt) is required to access concurrent license keys from the servers mentioned above. Refer to the DSLS installation CD for related documentation.

LUM

A LUM configuration file (i4ls.ini) is required to access concurrent license keys from the servers mentioned above.

The minimum IBM LUM level is V4.6.8.3.

The release of IBM LUM, together with any applicable patches, can be downloaded at no charge from <http://www-306.ibm.com/software/awdtools/lum/>.

Refer to the IBM website at <http://www-306.ibm.com/software/awdtools/lum/> for updated information on LUM system requirements.

Note: LUM 4.6.8 cannot be used on virtual machines for Node-lock or server installations.

LDAP

SmarTeam Authentication supports the following LDAP systems:

- ☐ Microsoft Active Directory
- ☐ IBM Tivoli Directory Server 6.0
- ☐ SUN Java System Directory Server Enterprise Edition 5.2
