

Menu Bar

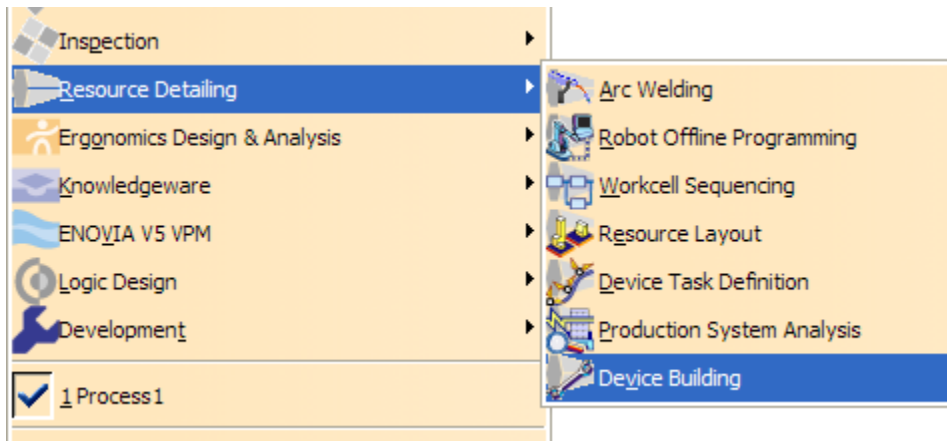

This section presents the process commands that are contained within the Device Building workbench, and that appear *only* on the menu bar, not on toolbars.

Common V5 commands, such as **File > Save**, are documented in the *V5 Infrastructure User's Guide*; common product creation commands, such as **Insert > New Components** are documented in the *Product Structure User's Guide*. Some of the menu options you may see while using the product may not appear here because the options available depend on your configuration. Check the other relevant product documentation for documentation of those options.

Commands that appear both on toolbars and menus are referenced in the toolbar sections following this section.

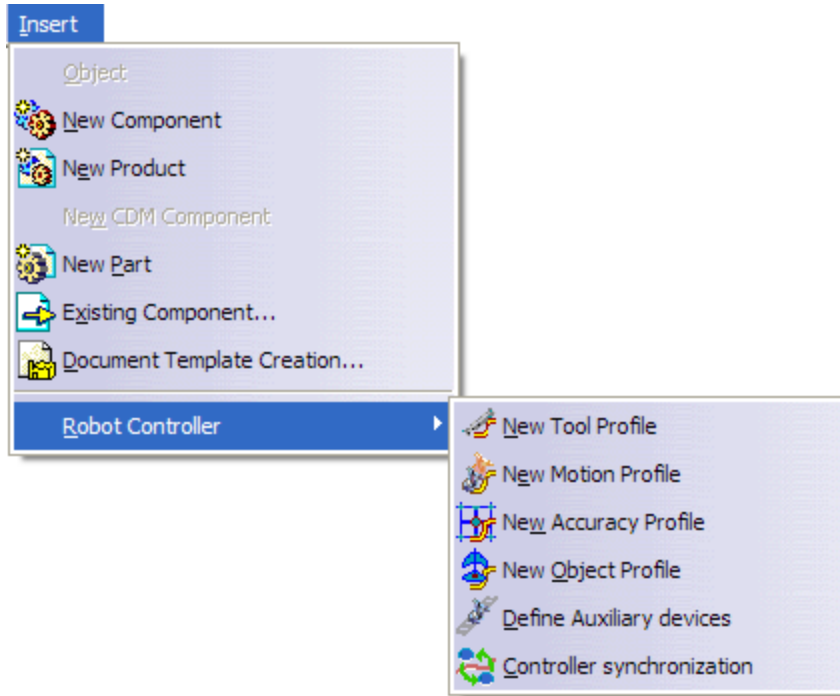

Start

For
Device Building

See
Entering the Workbench

Insert

For
Robot Controller

See
Creating and Editing Profiles
