Product description: IBM DB2 Content Manager is the core product within IBM's enterprise content management portfolio. This product provides a single, open, and comprehensive platform for managing, sharing, reusing, and archiving of all forms of business information.

Supported geos: Americas, Europe, Asia Pacific, Worldwide

Supported region: Worldwide

Headquarters location: New York, US

Compelling differentiation: Helps you manage access and integrate critical business information on demand, and integrate all forms of content including document, Web, image and rich media across multiple business applications. Delivers complete, consistent and integrated information to customers, trading partners and employees, where and when they need it through the Web, portals and call centers. Enables users to leverage content from multiple applications and business processes, promoting content re-use (instead of re-creation), and control over the quality and consistency of content published to a portal or a web site.
