Product description: Keeping production systems trim and responsive are key focuses for most DBAs in today's business environment, especially with regulatory compliance laws like Sarbanes-Oxley (SOX) requiring that DBAs retain more data than ever before. DB2 Data Archive Expert, part of IBM's suite of regulatory compliance tools, helps you meet these requirements as well as improve the performance of your DB2 environment by enabling you to move seldom-used data to a less costly storage medium without additional programming.

Supported geos: Americas, Europe, Middle East, Africa, Asia Pacific

Supported region: Worldwide

Headquarters location: New York
