Chapter 21. Service mode commands

The following correction should be noted.

applysoftware

Page 221 Correction to syntax diagram:

Syntax

Parameters

-file filename_arg

Specifies the filename of the new software package.

-ignore

This optional parameter results in the loading of packages while bypassing prerequisite sequence checking. In this case, the hardened data on the node is deleted and the node no longer believes it is a member of the cluster. This procedure risks loss of cache data and loss of cluster integrity if a node quorum cannot be formed from remaining nodes.
